

# Solid Source Delivery System

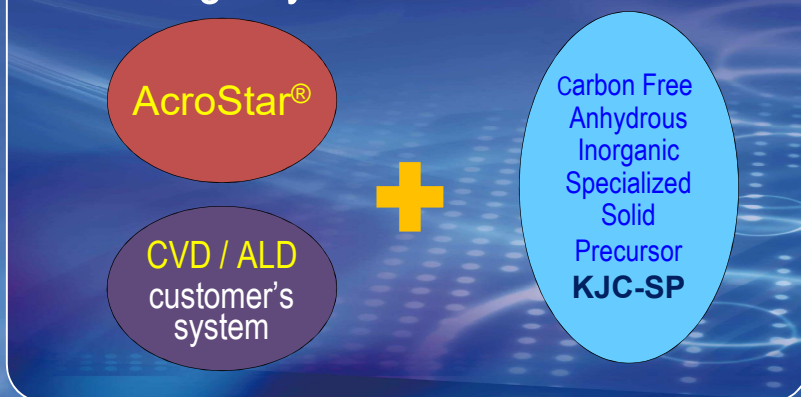

## AcroStar®

In recent years, carbon-free inorganic solid materials have attracted attention in CVD/ALD field, but the vapor pressure is lower than that of organic materials. So there was no system for stably sublimating and supplying the materials to the CVD / ALD tool for thin film formation. KOJUNDO has developed AcroStar®, a system that stably sublimates and supplies the precursor, by utilizing its many years of R&D experience in thin film forming materials.

### AcroStar® features

1. To propose pipes and valves equipment that can handle process heating from 150 to 200 degree C
2. Parallel Switchable Line for continuous operation system and Single Line for experiment / prototype system are available.
3. To propose the optimum system for supplied solid precursor
4. To customize the system for customer's film deposition tool

To arrange system to customer's tool

AcroStar® Control panel
